

Task

Four tasks, three hours each, completed in sequence. Decisions you make about scope, data and structure are part of assessment.

Task 0 - Foundation: Build a minimal e-commerce backend with products, customers, and orders.

Task 1 - Basic: Add an assistant that answers customer questions about products using the catalog.

Task 2 - Mid: Extend the assistant capabilities so customers can search products, check their orders, and place an order by chatting.

Task 3 - Expert: Let a store operator add products in bulk by pasting a link to where their product list already lives.

Submission

Please upload a **single zip in your Google Drive** using the structure below. Submit the **Drive Folder Link**.

None

submission.zip	
├ REPO_URL.txt	public repository URL, one line
├ code/	full source, required if REPO_URL is absent or not publicly accessible
├ README.md	assumptions, exclusions, incomplete work, third-party services, time spent
├ transcripts/	raw machine-readable AI session logs, unedited, one file per task
├ fixtures/	the test data you generated
├ tests/	your test cases, including adversarial ones
├ RUN.md	the single command that starts the system from a clean state
└ .env	only if a non-model key is required

If neither an accessible repository URL nor a `code/` directory is present, we have nothing to review and the submission is disqualified at intake.

Guidelines:

- One commit per task, tagged `task-0` through `task-3`.
- The system must start from a clean clone or unzip with data already present. A submission that does not start cannot be assessed.
- `transcripts/` must contain tool output. A written account of the work does not substitute for it.
- List every external service in the README with provider, purpose, and the task that needs it.
- Please do not commit keys. Any key other than an OpenAI-compatible model key belongs in `.env` at the zip root.
- Any stack, model, tooling or budget is acceptable. Browser automation and MCP tooling are permitted.
- Self-timed. Report the time you actually spent. Overrunning and telling us scores higher than finishing and not mentioning it.
